Narrative:

On 11/12/22 at 0246 hours, this investigator was notified of the death of Candi Miller. Ms. Miller is described as a 41-year-old black female. This investigator was dispatched to Southern Regional Medical Center. Upon arrival, the following information was provided by Charge Nurse Ruth Koku (REDACTED):

The decedent's husband returned home on 11/11/22 at approximately 2200 hours after being discharged from the hospital due to a medical episode at work. No complaints were voiced by the decedent at that time as she was assisting her husband in his recovery. At approximately 0200 hours, the decedent's husband woke up and went to check on the decedent. He discovered her unresponsive and 9-1-1 was contacted. He initiated CPR. Upon EMS arrival, resuscitative measures continued en route to Southern Regional Medical Center where the decedent arrived at 0216 hours. Despite all efforts, the decedent was pronounced at 0222 hours by Doctor Marlena C. Cain, MD.

At the time of this investigator's arrival, the decedent was lying in a supine position in a hospital bed. No visible injuries were identified. She was clad in a hospital gown. The decedent's height is estimated to be 5'5". She weighs 161 pounds.

The decedent's medical history consisted of Lupus, diabetes, high blood pressure, and she is currently pregnant. The decedent's husband stated that the decedent has ongoing issues related to her lupus. For approximately one month, the main complaints voiced by the decedent were her feet being swollen and heavy vaginal bleeding. The decedent was only able to stand on her feet for short periods of time. The decedent's husband was not sure how far along the decedent was in her pregnancy. She did not go to an OBGYN due to the current legislations on pregnancies and abortions. On 11/9/22, the decedent reportedly took an abortion pill that she ordered online. The husband was not aware of the name of the pill, only

Case Number: 20220342 Miller, Candi

that she purchased it from a company based in India. The decedent has three other children, the youngest being 3 and 14. This investigator inquired if the decedent had any complications with the pregnancy or delivery of her three-year-old daughter. The husband stated that the decedent did have complications, however, he could not recall the specifics. The decedent was prescribed several unknown medications. She was reportedly compliant. She did not have a history of drug abuse or illicit drug history. The decedent's last hospitalization was in May of 2022 after a motor vehicle accident. The decedent's son believes that she suffered a dislocated collar bone. She was treated at Grady Medical Center, The decedent's husband was aware that one of the decedent's doctors was located on Cleveland Avenue, but he could not provide any more information. Her last doctor's visit was not known. He and the decedent's son insisted that the decedent was very private when it came to her medical information.

There is no investigating agency currently assigned to this case. At this time, this death is being viewed as natural. There are no current suspicions of foul play.

Based on the information provided at this time, an examination by GBI is necessary.

Medical records will be requested by this investigator. Hospital photos were uploaded into CODIMS. Hope Funeral Home will be contacted once GBI approves transportation.

India from LifeLink requested clearance to speak with the decedent's family for donation. This investigator approved and informed her that the case would be reported to GBI after 0700 hours.

Tiana Johnson

Corinthia Richardson of GBI MEO accepted the case and authorized transport to their facility.
